

Ballistic Resistance – Test Report

C-Bond Systems, LLC.

Client: Attention: Bruce Rich

410 Pierce Street Houston, TX 77002

Date of report: 15 June 2015

Report prepared by: Ashley Gowland, Customer Operations Coordinator

Report reviewed by: Wesley Mason, Manager of Technical Operations - Hard Armor

Test method and Per Customer Instructions

supporting documentation: NIJ-STD-0108.01, Level 1

Job number: 000004449

and inspection results:

Test item receipt date, shipping method, identification information, identification information,

Date of testing, test range, Testing commenced at the H.P. White Laboratory, Inc. facilities at 3114 Scarboro Road, and testing performed: Street, MD on **15 June 2015**.

Date testing completed, sample disposal, return shipping method:

Testing concluded on 15 June 2015; sample(s) will be discarded, unless otherwise instructed.

Test data transmittal method and storage location:

This test report and test data were transmitted via email in a manner compliant with ISO 17025 requirements. Permanent electronic and hardcopy files are maintained in accordance with HPWLI data storage policy on data storage systems, filed by job number.

Revision number and date: NA

Disclaimer:

Testing was performed on samples provided by the client. H.P. White Laboratory, Inc. holds no responsibility for sample selection methods. This report is based on data obtained from testing only the samples submitted, and should NOT be interpreted as an endorsement by H.P. White Laboratory, Inc. of the continuing quality or performance of any other items of the same, or similar, design. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the Federal Government. This testing was performed by H.P. White Laboratory, Inc. to client specification, and the test results are the property of the client, who holds all rights of

reproduction or publication of this report and related test data.

C-Bond Systems, LLC. HPWLI 000004449 15 June 2015 Attention: Bruce Rich

Test Procedures

Ballistic Resistance Testing: All testing was conducted on an indoor range at ambient conditions in accordance with your instructions and the general provisions of NIJ-STD-0108.01. Testing was conducted at threat level I, using caliber .38 Special, 158 grain, RN lead and 22, 40 grain, LRHV ammunitions. The test sample was positioned 16.5 feet from the muzzle of the barrel to produce zero degree obliquity impacts. Photoelectric infrared screens were located at 6.5 feet and 9.5 feet which, in conjunction with electronic chronographs, were used to compute bullet velocities at 8.0 feet forward of the muzzle. Penetrations was determined by visual examination of the 0.020 inch thick 2024-T3 aluminum witness plate, placed parallel to and at a distance of 6.0 inches behind the test sample. Table I provides a summary of information on the attached data record(s).
